4 Caller ID information

On GSM connections the caller ID may not be shown in canonical format (+346091234567).

It might be shown without country code (6091234567) or even the phone number only (1234567).

Use Tixi CLIP-Tool to find the correct caller ID syntax.

We noticed that some SIM cards require the ISP number in different syntax.

e.g.: "+34-607-100300" could be required as "607100300" or even "0034607100300".
